

**AMENDMENTS TO THE SPECIFICATION**

Please replace the paragraph beginning on page 21 with the following amended paragraph:

With reference to Figure 5, once the auction process invention is initiated by a valid RFB, there is described how the central controller (Element 100) queries the database storage device (Element 400) for relevant CSOs. The central controller (Element 100) then uses simple mathematical logic to sequentially process and rank each seller's "Good" CSO, in step 405, against a competing seller's "Good" CSO price, in steps 406, 407 and 408, stepping down, or up, as the case may be, through each successive competing "Better" CSO price, in steps 409, 410, 411 and ~~[[402]]~~ 412, and "Best" CSOs, in steps 413, 414, 415 and 416, of potential sellers.
